Positions Held

U.S.F.S Heritage Program Manager / Forest Archaeologist. *Salt Lake City, Utah.* (8/10-Present)
(GS-0193-12) (40 hours per week) Uinta-Wasatch-Cache National Forest. The Uinta-Wasatch-Cache NF (UWCNF) manages 2.3 million acres of Public Land and is comprised of 7 Ranger Districts. The UWCNF handles the highest volume of Section 106 compliance work in R4, and has a well-rounded Section 110 compliance program.

Duties included providing forest level leadership and guidance to manage the Uinta-Wasatch-Cache's cultural resources, cave resources, and facilitate consultation between the Forest Supervisor/ Public Affairs / and Tribal partners. I provide guidance and training to forest staff, and forest line officers about legal compliance procedures related to Section 106 and Section 110 of the National Historic Preservation Act, as well as Tribal consultation and Archaeological Resource Protection Act incidents. As the Heritage Program leader, I regularly provide leadership with guidance relating to cultural and ecological resources related to a number of program areas such as: Recreation, Wilderness, Lands, Minerals, Timber, Range, Special Uses, Wildlife, Soils, Botany, Fire/Fuels, and Planning. I provide forest level guidance to facilitate Tribal Consultation on a Government-to-Government basis. I have authored guidance for the Forest Service Intermountain Region (Region 4), for cultural resources relating to climate change for the Intermountain Adaptation Partners R4 Climate Change Report (Chapter 11- Cultural Resources). I have organized and executed Heritage Program budgets and workplans. I have worked with district staff across the forest to accomplish recreation program and heritage program goals. I regularly work with programs and project proponents to ensure compliance with federal law and regulations, as well as the Wasatch-Cache and Uinta National Forest Plans. I have created a long-term Heritage Program Management Plan for the Uinta-Wasatch-Cache National Forest to guide the Section 110 and Section 106 efforts. I regularly consult, and work with stake holders through issues that may affect ecological and cultural resources. I directly supervise (1) pft GS-0193-11 position, (2) pft GS-0193-07/09 positions, in addition to a changing cadre of multiple seasonal and intern positions depending on the needs of a given fiscal year. I also oversee cultural resource contractors on large and small scale undertakings across the forest. I have written numerous Memorandums of Agreement addressing adverse effects to historic properties, Programmatic Agreements, and Partnership Agreements with colleges and universities.

Collateral Duties:

- Forest-wide Cave Manager
- Paleontological Permitting
- Tribal Consultation Facilitator in Partnership with PAO.
- Cultural Resource Team Leader, Intermountain Adaptation Partners, Assessing

the effects of climate change on cultural resources in Region 4 (7/2015-2018)
-Assisted in drafting Forest Service Handbook (FSH) 2309.12 Heritage Resources

Research and Publications:

Ph.D. Dissertation: *Decisions in the Desert: An Application of the Field Processing Model to lithic tool-stone procurement* (2019). Models generated under the umbrella of behavioral ecology have the potential to provide an explanatory framework for human behavior. The Field Processing Model is employed to elucidate the behavior of central place foragers in relation to the tradeoffs people made when procuring lithic resources. In this case, the tradeoffs relate to the decisions foragers made to optimize the utility of the load by choosing whether or not to field processes a resource package prior to returning the resource to a residential base, in light of transport time as inferred by distance. The Field Processing Model sets up expectations that should be identified in archaeological materials if foragers are meeting the assumptions inherent in the model. These expectations are investigated through the quantitative analysis of lithic debitage and geochemical obsidian sourcing of artifacts found deposited in archaeological sites away from the point of procurement. This allows for the identification of inferred transport distance. The study looks at a suite of archaeological sites found in the Sheeprock Mountains, located in the West Desert of Utah.
